

Finishing Off Marking

There are a range of procedures you need to follow once the marking procedures are complete.

After identifying and marking procedures have been completed the following action is required:

1. Clean the site and the equipment.
2. Ensure all equipment is packed away.
3. Count the young animals and complete the records.
4. Mother up calves and cows.
5. Work animals quickly, quietly, safely and humanely to release.
6. Follow all Workplace Health and Safety requirements.
7. Report to the supervisor.

The actual methods of carrying out these procedures will vary slightly between workplaces. However the reasons for carrying out these procedures are the same everywhere: Protect the animals and provide appropriate welfare to the animals.
