

Activity: Environmental Incident Report

Using the Environmental Incident Report template provided for this activity, complete it for one of the following incidents:

Incident 1

The mine's neighbours have been complaining to you about dust from the mining operation. This is causing some minor health problems such as coughing and sneezing, and requires constant cleaning and ventilation of their homes.

Incident 2

You note that the run-off drain at the base of the waste stockpile has become blocked with some fallen rock. This has caused the water from the winter rains to run off across a grassland area, causing erosion and washing away some of the vegetation.

Incident 3

A problem that has occurred at your work site recently.

When you have completed the form, store it in your task folder and when all your tasks are completed email the folder as a compressed file to your trainer.
